

Linear Equation:

Acclaim's X-Stick 500/1000 SMD LED Strips
Line Up Together For The Long (and Short) Run

LOS ANGELES – The new *X-Stick 500/1000* from Acclaim Lighting will line up down the stretch and make it across the finish line with flying (and brilliant) colors. These high-output RGB color-mixing SMD LED strips can be placed end-to-end across a ceiling, down a hallway, around a floor perimeter or in any architectural or entertainment application where a line of color is desired. Because they fit together so easily and seamlessly, X-Sticks are especially ideal for long runs of cove or linear lighting.

Made of extruded aluminum, the X-Stick features a sleek profile and compact design to fit into a variety of spaces and configurations. For further versatility, it is available in two lengths: X-Stick 500 (500mm), and X-Stick 1000 (1000mm).

The shorter X-Stick 500 contains 24 high-intensity 5060 SMD (Surface Mount Device) red, green and blue tri-color LEDs. Twice as long, the X-Stick 1000 contains 48 5060 SMD red, green and blue tri-color LEDs. Both models can produce a virtually limitless range of colors via RGB mixing, with smooth color changes, to create the perfect lighting shades for any environment.

“Lighting designers were requesting an LED product that they could use to create long ‘unbroken’ lines of color,” said Eric Loader, director of sales for Acclaim Lighting. “The X-Stick answers this need perfectly, because the units are so easy to mount and they line up together end-to-end so seamlessly. They’re great for any length, long or short. Plus, in addition to being simple to install, they’re easy to control and operate.”

Featuring plug-and-play operation, the X-Stick can run in stand-alone mode, or it can be operated with a DMX controller. For stand-alone operation, each unit features 7 built-in programs, which will run in sequence when in the X-Stick is in Auto Mode. Chase speed and fade time are selectable by dipswitches.

The long-life and low energy consumption of LEDs make the X-Stick an economical and hassle-free solution for architectural users. Under normal operating conditions, the unit’s LEDs are rated at 50,000 hours, saving the time and expense of lamp replacement. Energy costs will be minimized too; the X-Stick 500 consumes only 5W at full RGB intensity, while the X-Stick 1000 consumes 10W at maximum performance.

Each X-Stick features 5-pin terminal connection. An adjustable mounting yoke is included on each unit. The X-Stick 500 measures 19.7”L x 1.1”W x 1.2”H (500mm x

28mm x 30mm), and weighs 0.7 lbs. The X-Stick 1000 measures 39.3”L x 1.1”W x 1.2”H (1000mm x 28mm x 30mm), and weighs 1.1 lbs.

The MSRP of the X-Stick 500 is \$120.00. The MSRP of the X-Stick 1000 is \$200.00
Warm white and cool white versions of the X-Stick 500/1000 are available upon request.
