X-BAR 500

## Rutherford Design creates stunning LED architectural lighting effect with Acclaim Products at the Museum of Latin American Art in Long Beach, CA

By request of the long time client for Rutherford Design [www.rutherforddesign.com](http://www.rutherforddesign.com), the Museum of Latin American Art <http://www.molaa.org> in Long Beach California called on Richard Rutherford to come up with an LED solution to light the architectural parapet detail of the building.

After some testing, ultimately the X-Bar 500 was the solution. Approximately 125 units were installed outside onto the building structure to light each 24" square box which surrounds the building.

"The X-Bar is the perfect product" comments Richard Rutherford of Rutherford Design.. "They were simple to install, program and the whole system runs on a dmx playback system and two 15A power circuits on time clocks. We installed the IP rated UL power supplies and DMX data distributors in NEMA enclosures and the system was fairly plug and play from there."

Below are some sample photo's of the system in action and more information on X-Bar Series can be found on our web site at [www.acclaimlighting.com](http://www.acclaimlighting.com) or contact [info@acclaimlighting.com](mailto:info@acclaimlighting.com)
