**The new Finding Nemo Ride at Disneyland California features X-Ball's inside the submarines.**

The highly anticipated opening of the new Finding Nemo attraction ride at Disneyland in California revealed some new high tech LED lighting solutions. The Disney team looked to Acclaim lighting to provide some special effect lighting inside the subs.

After some testing, ultimately the [X-Ball 42 B](#) was the right solution. Approximately 8 units were installed inside each of the 10 submarines and is triggered by their proprietary show control system via DMX. The units are used during the ride as ambient lighting during the beginning of the ride and add to the experience by providing special strobbing and color change during the show.

Below are some sample photo's of the system in action and more information on X-Ball Series can be found on our web site at [www.acclaimlighting.com](http://www.acclaimlighting.com) or contact [info@acclaimlighting.com](mailto:info@acclaimlighting.com)
