Flex Spectrum Interior™ is an RGBW flexible strip designed to deliver a wide and accurate gamut in applications where saturated colors, pastels and high-CRI whites are required. By combining blue with the base warm white, it is straightforward to create a wide range of white hues, from 3000K through to 7000K, with CRI values in excess of 80.

Thanks to our careful binning policies, consistent color rendering is assured not only across the full length of every spool, but also between multiple batches. A solid copper substrate ensures optimum heat transference and flexibility. Mounting is greatly aided by 3M™ VHB™ adhesive backing while a full range of aluminum channels are available to suit numerous applications.
